

ABSTRACT OF THE DISCLOSURE

Methods and systems for initiating a collaboration between users are disclosed. An application server receives information pertaining to a call to a first user placed by a second user. A notification server sends notification of the call to a device associated with the first user. A network access server may then receive a response to the notification. Thereafter, the notification server sends a notification of a collaboration request to a device associated with the second user based on the response, and the application server initiates a collaboration between the first user and the second user based on a determination that the second user accepts the collaboration request.
